docSTAR™ Barcode.

Read it as less work, more profits.

The best way to boost your productivity, bar none.

The docSTAR Barcode Module gives docSTAR the ability to read barcodes, allowing your business to dramatically increase both speed and accuracy in its filing. With barcodes, you eliminate the tedious work of entering data, while eliminating human error — saving you significant amounts of time and money.

docStar™

Think fast.

docSTAR Barcode:

★ **Fully automates filing by reading barcodes containing key information such as customer names and account numbers and entering this data into each document's titles, keywords or custom fields.**

★ **Requires no human intervention, making it the fastest option for storing documents in docSTAR.**

★ **Accelerates your filing dramatically, whether you're using barcodes to store "proofs of delivery," medical claims, loan origination documents or any other paperwork.**

Make no mistake.

Quite simply, barcode recognition is the most intelligent, accurate way to file your documents. Even on poor quality originals, error-checking and image enhancement features produce virtually error-free results.

★ **No typos, misread names or transposed numbers.**

★ **Documents are where you can find them — every time.**

★ **Deployed with docSTAR DataLink™, docSTAR Barcode instantly captures barcode information and compares it with your data to verify accuracy and add supplemental information automatically.**

Where do barcodes come from?

More and more documents generated today already contain barcodes. Barcode fonts are available from various sources so you can add them to the documents or forms your company creates. Barcodes can even be added to documents on labels. And docSTAR's Integration Agent can help your primary business application print barcoded cover pages. Whatever the source of barcodes, docSTAR Barcode reads them to ensure fast, accurate filing.

Scanning made simple.

Barcodes can also help expedite your scanning by indicating the start of each new document and selecting a filing template — saving you steps, time and money.

Specifications

Recognizes EAN 13, EAN 8, UPCA, UPCE, Code 39, Code 128, Interleave 2 of 5, and Codabar.

docSTAR System Software, Version 3.1 or later.

docSTAR System Software, Version 3.2 required for scanning-related features.
